Control

“What if I lose my keys?”

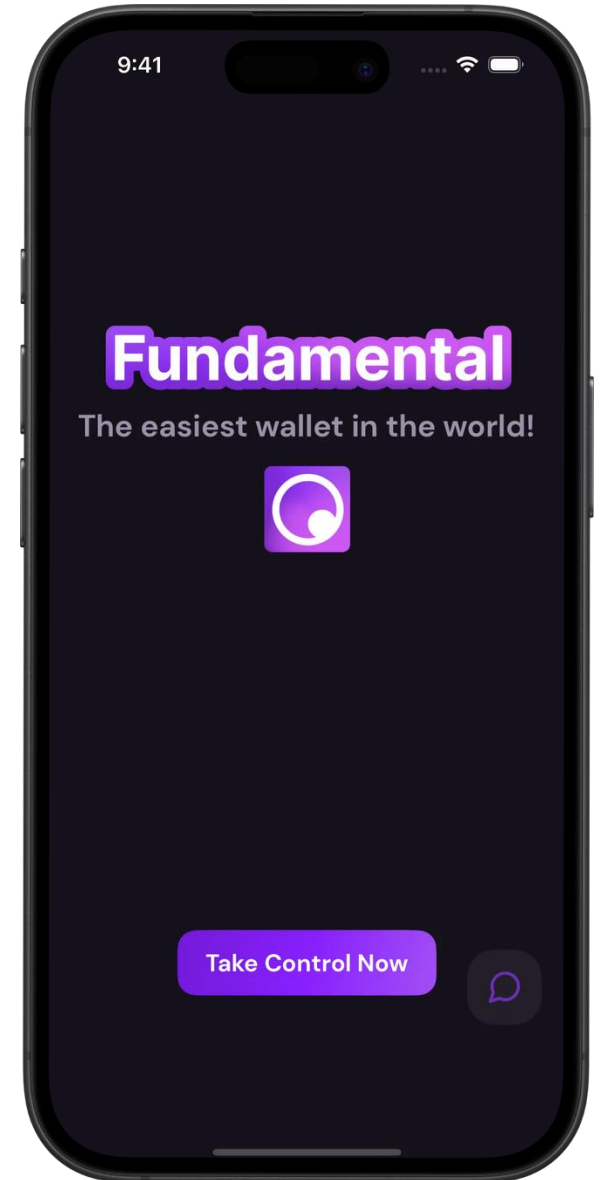

Fundamental

The easiest wallet in the world

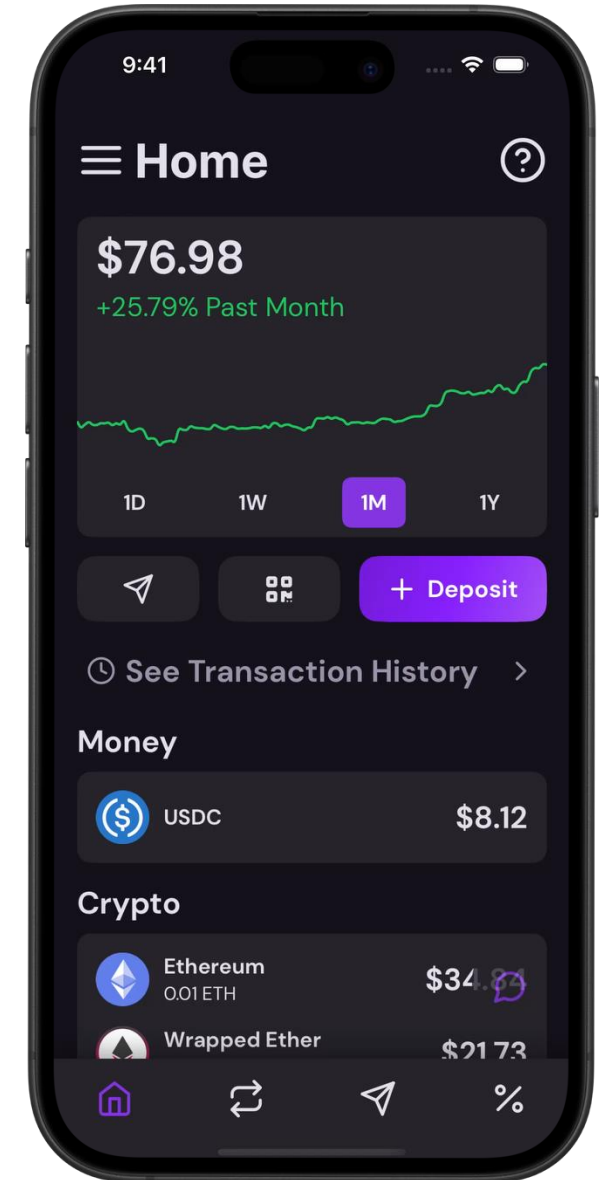

Fundamental is Secure

- Create a key from your existing logins
- Audited technology from Privy
- No one else has your key
- Recovery is trivial

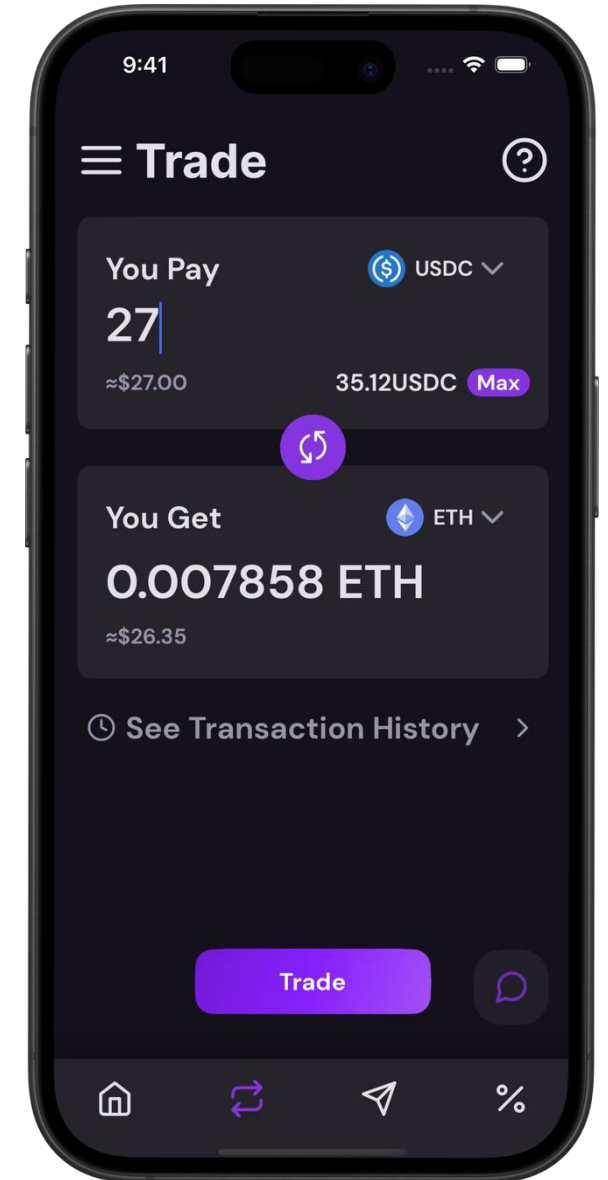

Fundamental is Easy

- Simple and accessible UI
- Designed for non-crypto-natives
- Help buttons placed on every page

Fundamental is Powerful

- Access to a massive DeFi ecosystem
- The power of crypto at your fingertips

Our Vision

“Bring the power of a new financial system to the whole world”

Measures of Satisfaction:

Roadmap

August 2025

Sprint 1

- Market Discovery feature
- Increase available assets
- Address Beta feedback

Sprint 2

- Earn / Yield Feature
- Incorporate and set up legal structures
- Improve Payments

Sprint 3

- Add support for stocks
- Re-structure onboarding
- Improve History

Sprint 4

- Implement fee collection
- Integrate more apps and services
- Full launch on Android + iOS

February 2026

Moonshot:

Integrate Gnosis Pay to give all users a physical spending card

Beta Test Plan & Live Demonstration

Core Functionalities for Beta Version

Feature	Description	Priority	Status
Wallet Creation	OAuth-based signup with providers like Google/Apple	HIGH	DONE
Profile Page	Modal view of wallet address, ENS, QR Code and copy actions	HIGH	DONE
Assets	Overview of user assets with live stats and charts	HIGH	DONE
Trade Page	Token-to-token swap functionality with real-time quoting and status tracking	HIGH	DONE
Send Page	Send tokens to other wallet addresses.	HIGH	DONE
On-Ramping	Buy tokens using fiat (credit card, Apple Pay)	MEDIUM	DONE
Wallet Key Export	View/Export seed phrase or private key	MEDIUM	ON HOLD
Token Framework Expansion	Easy addition of new tokens and types of tokens to the app	MEDIUM	DONE
Off-Ramping	Convert tokens back into fiat	LOW	PUSHED BACK

Test Scenario 1: Wallet Creation

- **Objective:** Ensure streamlined OAuth login & Wallet creation using Privy
- **Test steps:**
 - Open app and select login option (Email, Google, ...).
 - Authenticate with provider.
 - App loads wallet with default state.
- **Expected outcome:** Seamless wallet creation, redirection to home page.

Test Scenario 2: Register ENS

- **Objective:** Ensure wallet identity displays properly and ENS registration works as intended.
- **Preconditions:**
 - User logged in, without an existing ENS.
 - **Test steps:** On the Home page, tap on the user profile modal.
 - Enter a valid ENS address to be created.
 - Confirm to create the ENS.
 - View displayed user data (wallet address, ENS, QR Code).
 - Tap the copy icon to copy the wallet address.
- **Expected outcome:** User ENS is created, and all identity data is displayed properly, copy works, and the wallet address is in the clipboard.

Test Scenario 3: Send Tokens

- **Objective:** Ensure token sending works with confirmation.
- **Preconditions:** User logged in with available wallet balance.
- **Test steps:**
 - Go to the send page.
 - Enter a recipient address or valid ENS.
 - Select a token to send.
 - Enter an amount of said token to send.
 - Press “Send Funds” to open the confirmation modal.
 - Confirm.
- **Expected outcome:** Token is sent and new balance reflects instantly.

Test Scenario 4: Swap Tokens

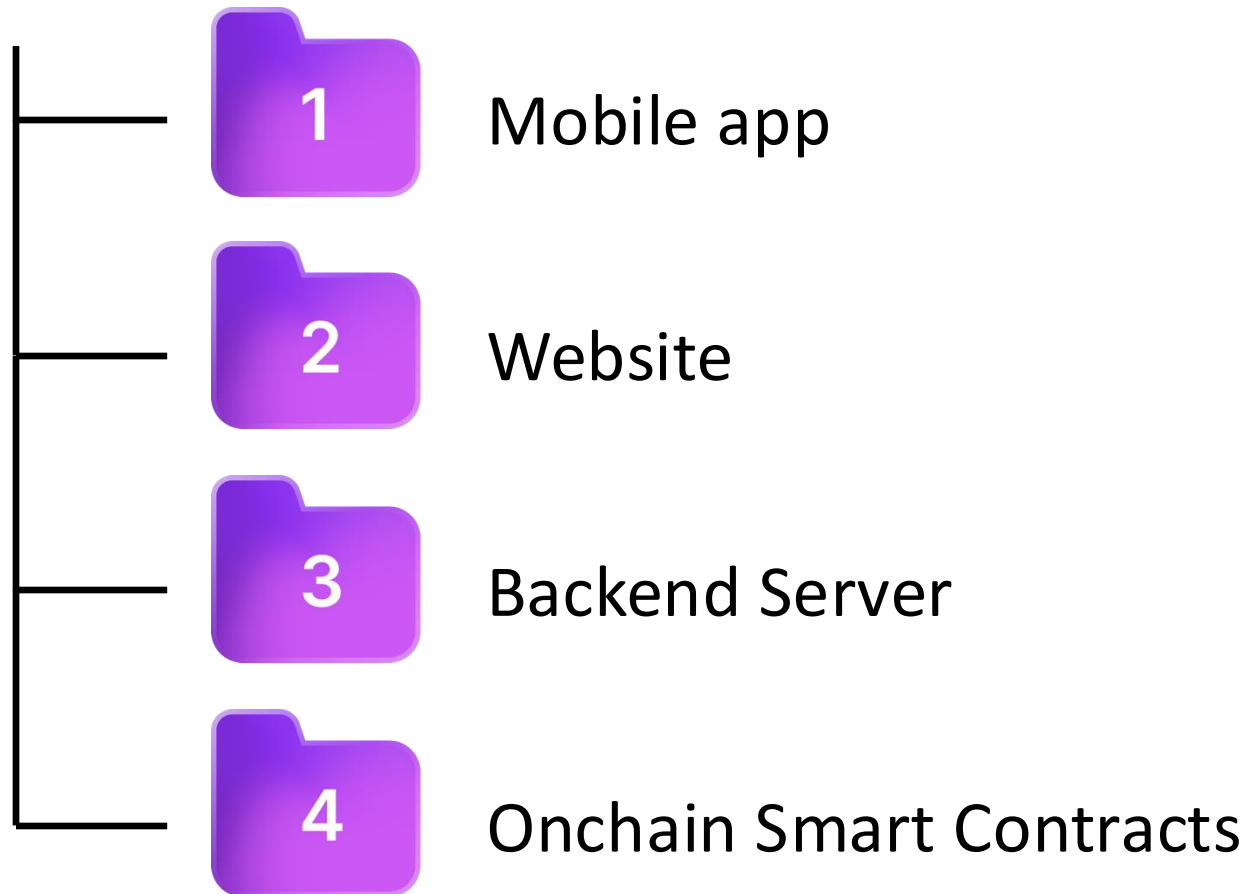

- **Objective:** Trade X quantity of token Y for token Z.
- **Preconditions:** User logged in, has assets deposited.
- **Test steps:**
 - Go to trade page.
 - Select an input token X and quantity Y.
 - Select an output token Z.
 - Confirm trade.
- **Expected outcome:** A trade order is created and executed. The user has Y less X, and an equivalent amount more of Z.

Project Structure & Team

Project Structure

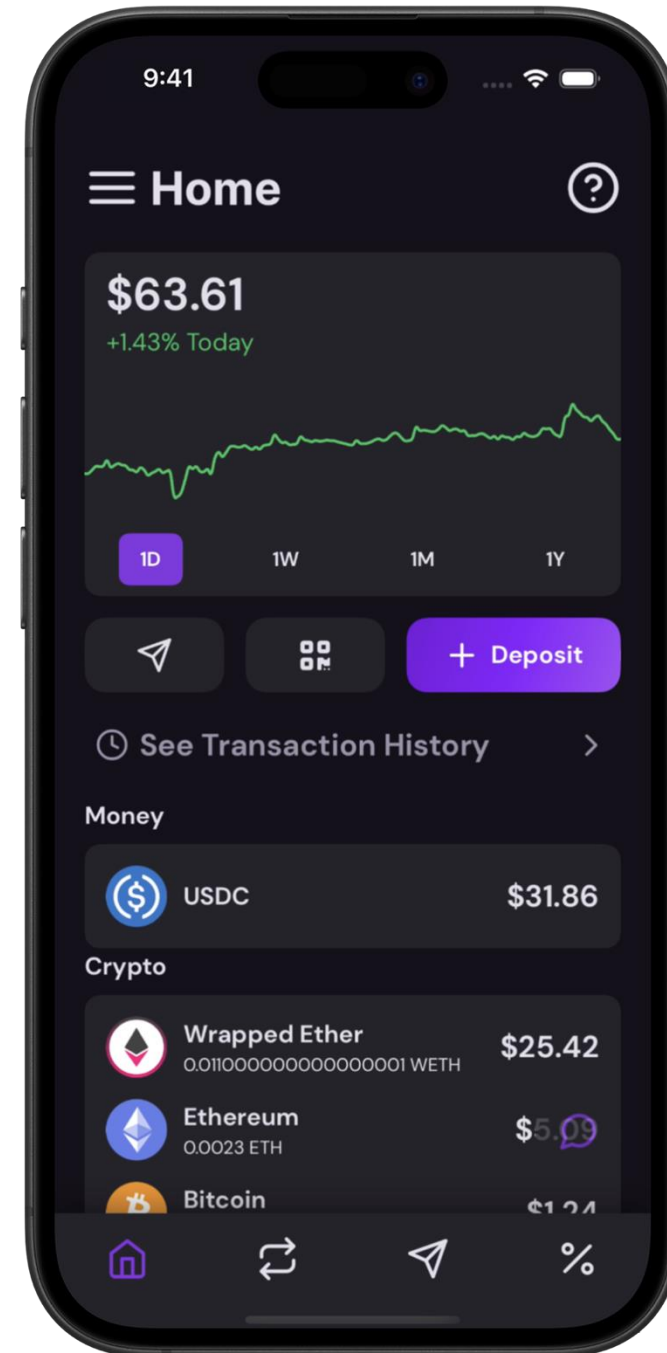

Four separate GitHub repositories:

Fundamental App

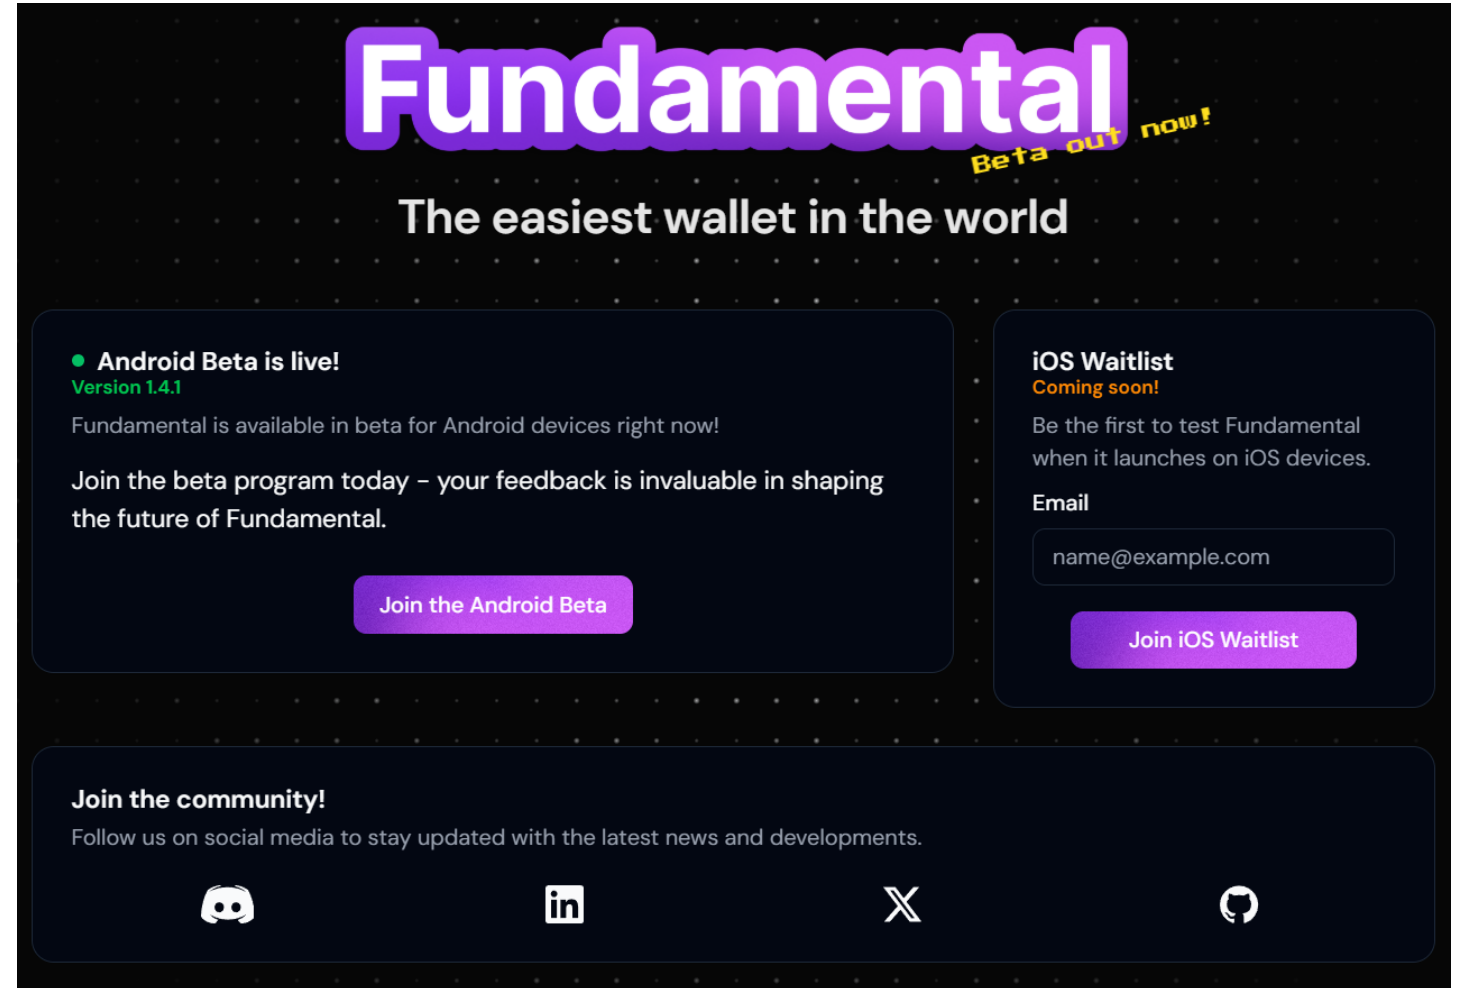

- Client
- Polished UI/UX
- Accessibility

Fundamental
Website

- Wishlist
- New features announcement
- Community Engagement

Fundamental
Server

- Fetch historical data
- Real-time monitoring
- Combine on-chain and off-chain sources
- Normalize and store data

Fundamental
Smart Contracts

Registrar

Handles new ENS creation

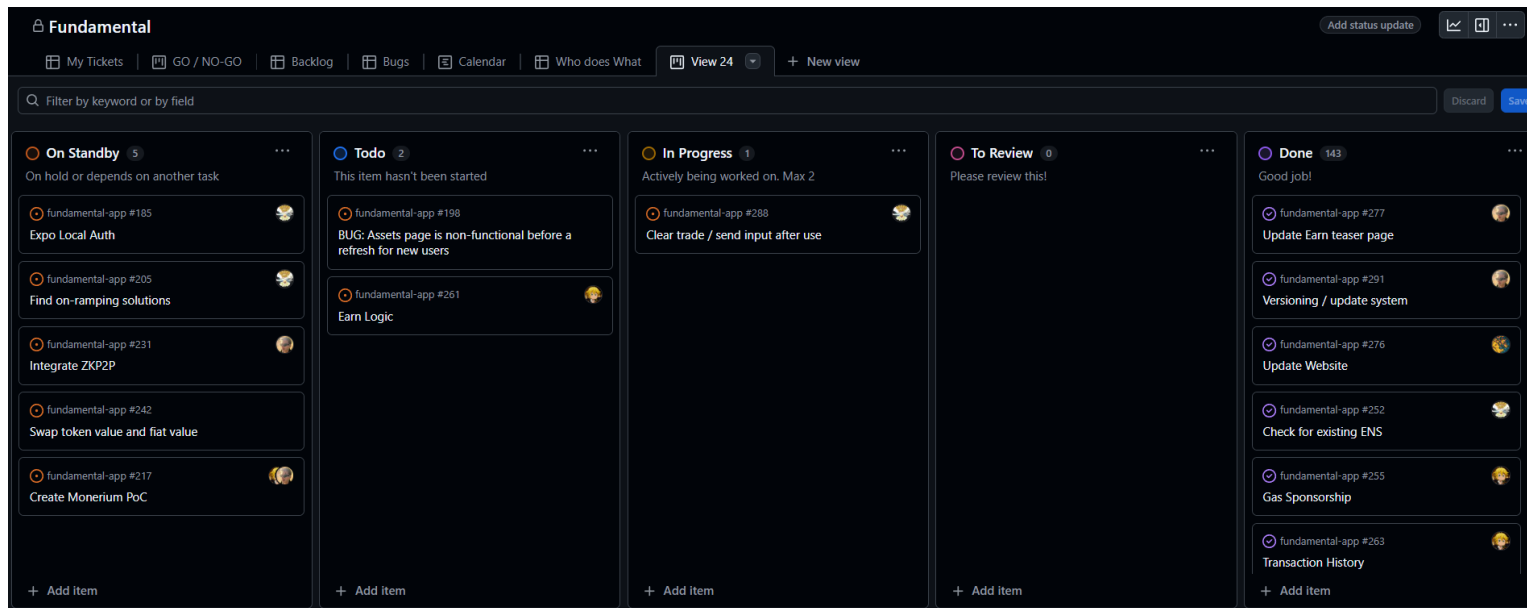

Registry

Stores all ENS names

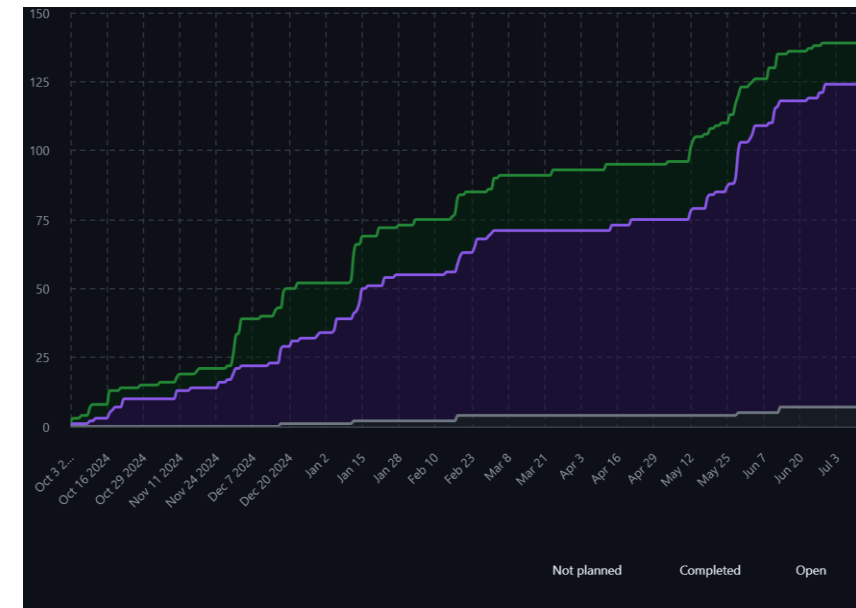

0xDf7782A4F5841Ef3Ae0bF828B4AC89C3018604F6 → ben.fdmntl.eth

Project Management

GitHub Project Board & Tickets

Ticket Progress Graph

Collaboration Tools & Workflow

Responsibility Distribution

- Each **member** has their **primary domain** but is also ready to help others
- **Shared progress** updates to catch misalignments or delay early.
- Collective decision-making on **trade-offs** and **pivots**.
